**CAUTION**

## CAUTION POINTS BEFORE INSTALLING MACHINE

Enagic India Suggest below caution points/steps before installing machine.

- Kindly follow and read manual & Water Related Question (WRQ) of product in detail before proceeding to installation of machine.
- Its Mandatory to have and install pre filtration system before installing unit depending on the source of water in India. You may have problem of hard water source at your place so please use suitable pre-filtration system to reduce hardness of water.
- Please check Quality, Hardness, PH, TDS of source water before installing the Machine. Its Advisable to maintain TDS up to 50-150ppm. There could be variances of TDS in diferent sources of water which has to be analysed to recommend the right type of product.
- Machine requires clean water with minerals to take place for ionization process.
- Please Use Voltage Stabilizer to avoid damage of machine power supply panel which may cause by electric fluctuation. It's VIMP. OR please use Surge Protector.
- Please use pre Filtration System to supply clean water to machine and increase durability of HG filters of your machine.
- Please install machine at even surface to be a safe placement to avoid fall down and keep the grey hose (secondary hose) parallel with the machine
- Kindly run Beauty water 1-2 min in morning and night on daily basis. This is a one of the prevention which may help to avoid cluster formation on electrolysis plates.
- Please contact Enagic customer care to clarify your more queries.

Above caution points helps to reduce the possibility of problem which may occur to your machine
